for weight & efficiency in
herringbone seats

UNUM TWO

Setting a new benchmark
for weight & efficiency in
staggered seats

Infinite adjustment and superb Zero G

Our patented Scimitar mechanism offers the passenger ultimate control of their comfort. With a unique kinematic and inbuilt lumbar support when needed, our Zero G must be experienced to be believed.

Wide and long bed

Relax and rest, in our oh so comfortable full flat bed.

Spacious footwell

Our creative design addresses the often-overlooked foot area by maximizing every inch of available space in an open and uncompromised layout.

Generous furniture and single piece table

With well thought out layouts in the console area, personal items are both close at hand and easy to find. The single piece table, slides and rotates allows the passenger to exit the suite with ease.

Privacy door option at every pitch

If privacy is a priority, we offer the option of suite door, that meets all existing DoT requirements.

Package protected for all major IFE innovations

We collaborate with all major providers of IFE and inset power solutions, to ensure we can accommodate the latest technology innovations.

Customisable finishes

With a broad choice of baseline fabrics and finishes, we offer our customers a platform for customisation to reflect their brand styles and values.

Elegant lightweight design

With an elegance and simplicity of design, we deliver passenger centric features, whilst eliminating the unnecessary. This approach enables our seats to set a new benchmark for weight in business class lie flat.

Maintainable and sustainable

As a broken seat can never be comfortable, our seats are both maintainable and easy to maintain. Our key assemblies, such as the seat and table cassette, have been designed to be changeable in minutes, on wing and on turnround.

Our seats are backed by a comprehensive global warranty plan.

Unum was the first seating manufacturer to commit to the Green Cabin Alliance. We seek to minimise embedded carbon within every component, and use innovative design solutions to ensure that at the end of life as much of the seat as possible is recyclable.
